Andon button Wireless Bluetooth with Ethernet receiver

<https://www.binarsolutions.com/en/>

Call for assistance immediately upon detecting any errors.

Our Bluetooth wireless andon button is designed to allow you to call for help and clear when the problem is solved.

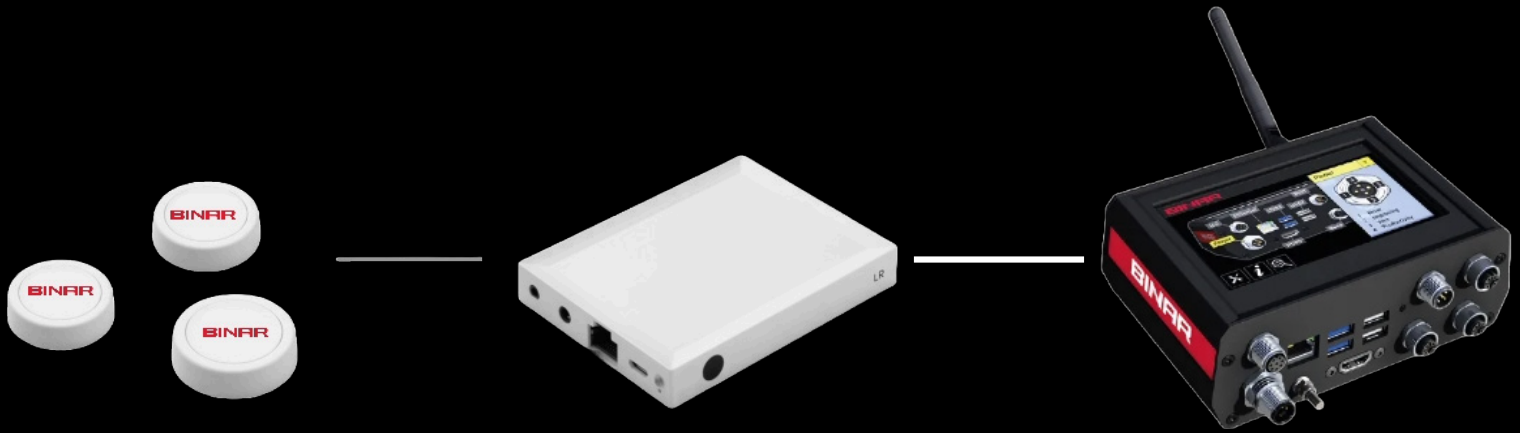

The wireless button is available in two different styles.

The first has only one button but can be configured for multiple uses as it has three triggers, push, double push and hold.

The alternative version incorporates two buttons and offers the same functions as the original.

Additionally, stickers can be applied to visually indicate a button for assistance and clarification.

BiHub supports the connection of up to 63 buttons simultaneously.

The LP304 serves as a vital connection point between the cloud, sensors, and intelligent devices. This powerful IoT gateway enables equipment on the production floor to be controlled via the company's integrated system.
